Talasalitaan is a simple dictionary program that can be used to check the spelling of any word. This project uses Baybayin as a spell checker, for that reason the program is limited to words that are written in Baybayin. The dictionary program also includes the Tagalog index dictionary. The program is also designed to show the user the plural and singular forms of a word. A special feature of Talasalitaan is its ability to detect the gender of a word. The program may not be suitable for those who have developed a high typing speed, it is designed for slow typists.

History It started when I needed a way to write down book titles and authors that I read in English. Later, I looked through the Internet and found that there were a lot of others writing down and translating words and phrases they were familiar with. Thus, I began working on this idea of writing my own dictionary and tagging the words that were familiar to me. The reason why I am so fascinated with the Baybayin language is because it is written from the top to the bottom or left to right. This is why the first version of the dictionary program included only the word from left to right. Later, I included the Tagalog Index of the words that was written in a Tagalog alphabet. I did this because I thought it could be useful for Filipinos around the world to write down things in the Tagalog alphabet that was easier than in writing in English. By the time I finished, I had a dictionary that I thought was an interesting project. Thus, I started looking for people who would like to review the dictionary and improve it. Then, I had a number of people who helped me improve the program. All of them have done a great job and they have given valuable advice. That is why the dictionary program came to be what it is today, Talasalitaan. How to use Talasalitaan is designed to show the user the plural and singular forms of a word. One just type the word that he wants to use, he will see the program will provide the plural and singular forms of the word. Besides, the program will use the Baybayin translation to the word that the user has typed. Most of the dictionaries provided the pronunciation for the word but not all of
